## **Abstract**

The `omdoc` package is part of the  $\text{\LaTeX}$  collection, a version of  $\text{\TeX}/\text{\LaTeX}$  that allows to markup  $\text{\TeX}/\text{\LaTeX}$  documents semantically without leaving the document format, essentially turning  $\text{\TeX}/\text{\LaTeX}$  into a document format for mathematical knowledge management (MKM).

This package supplies an infrastructure for writing OMDoc glossary entries.

## 1 Introduction

## 2 The User Interface

### 2.1 Package and Class Options

`smglo.cls` accepts all options of the `omdoc.cls` and `article.cls` and just passes them on to these.<sup>1</sup>

<sup>1</sup>EdNOTE: describe them

## 3 Implementation: The OMDoc Class

### 3.1 Class Options

To initialize the `omdoc` class, we declare and process the necessary options.

```
1 <*cls>
2 \DeclareOption{showmeta}{\PassOptionsToPackage{\CurrentOption}{metakeys}}
3 \ProcessOptions
4 </cls>
5 <*ltxml>
6 # -*- CPERL -*-
7 package LaTeXML::Package::Pool;
8 use strict;
9 use LaTeXML::Package;
10 ProcessOptions();
11 </ltxml>
```

We load `omdoc.cls`, and the desired packages. For the  $\text{\LaTeX}$  bindings, we make sure the right packages are loaded.

```
12 <*cls>
13 \LoadClass{omdoc}
14 \RequirePackage{amstext}
15 \RequirePackage{modules}
16 \RequirePackage{statements}
17 \RequirePackage{cmath}
18 \RequirePackage{presentation}
19 \RequirePackage{amsfonts}
20 \RequirePackage[english,ngerman]{babel}
21 </cls>
22 <*ltxml>
23 LoadClass('omdoc');
24 RequirePackage('amstext');
25 RequirePackage('modules');
26 RequirePackage('statements');
27 RequirePackage('cmath');
28 RequirePackage('presentation');
29 RequirePackage('amsfonts');
30 RequirePackage('babel',options=>['english','ngerman']);
31 </ltxml>
```

### 3.2 Input

`ginput` iterates over the language bindings.

```
32 <ltxml>RawTeX('
33 <*cls|ltxml>
34 \newcommand\ginput[2][\input{#2}]{\for\@I:=#1\do{\input{#2.\@I}}}
```

### 3.3 For Module Definitions

```

gimport just a shortcut
35 \newcommand\gimport[2] [] {\def\@test{#1}%
36 \ifx\@test\@empty\importmodule[load=#2]{#2}\else\importmodule[#1,load=#2]{#2}\fi}

guse just a shortcut
37 \newcommand\guse[2] [] {\def\@test{#1}%

gview The gview environment is just a layer over the view environment with the keys
suitably adapted.

with the keys suitably adapted.

### 3.4 For Language Bindings

**gle** The **gle** environment is just a layer over the module environment with the keys and language suitably adapted.

```

83 \gimport{#2}\def\@test{#3}%
84 \ifx\@test\@en\selectlanguage{english}\fi

```

**noun**

```

90 \newcommand\noun[2] {}
91 \</cls>
92 \<*ltxml>
93 DefMacro('\noun {}{}', '');
94 \</ltxml>

**qualifier**

```

95 \<*cls>
96 \newcommand\qualifier[3] {}
